

Sustainable Development Policy

Policy & Procedure Owner		ERFA Board
Approved by		ERFA Board of Directors
Date Approved	Date of last revision	Next review
26 August 2015	9 July 2015	August 2016

1. Introduction

Edmund Rice Foundation Australia’s (ERFA) Sustainable Development Policy is founded on ERFA’s conviction that the principles of sustainable development are pivotal in working to eradicate poverty. Therefore, sustainable development is to be central in the design and implementation of all ERFA supported projects in developing nations.

ERFA differentiates between development and welfare, evangelism and partisan politics. ERFA recognises that welfare is primarily concerned with support and maintenance, more than with the processes of capacity building and empowerment that are intrinsic to sustainable development.

2. Purpose

The purpose of this policy is to outline ERFA’s approach to sustainable development in engaging with communities in developing nations and ERFA’s expectations of its in-country partners in this respect.

3. Context: Sustainable Development and ERFA’s Vision & Mission

ERFA’s Sustainable Development Policy is grounded in its Vision and Mission.

ERFA’s mission, to support its in-country project partners in working collaboratively with their local communities in development projects based in the expressed needs of those communities, gives expression to ERFA’s vision for a just and peaceful world where the dignity and rights of all are respected and in which all have control over their lives and have access to the resources and opportunity to achieve their potential.

4. Defining Sustainable Development

The concept of sustainable development has been central in international, national and local development policy since 180 countries committed themselves to the concept at the 1992 Rio Earth Summit, which endorsed the 1987 definition of development of the World Commission on Environment and Development.

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

ERFA acknowledges that the concept of sustainable development has since broadened to incorporate economic, social / cultural and environmental sustainability and that a holistic sustainable development approach integrates these.

4.1 Economic Sustainability

With respect to economic sustainability, ERFA is focused primarily on:

- Establishing long-term project financial viability beyond ERFA's participation
- Building project sustainability through the professional development and training of local project leadership and staff, especially in education and health care
- Enhancing employment opportunities through school education and vocational training
- Working to assist communities to lift themselves out of poverty through micro-credit schemes to enable the establishment of small businesses and livelihood programs, which in turn enable those communities to achieve a degree of economic independence and to access education and health care

4.2 Social / Cultural Sustainability

ERFA acknowledges that:

- development cannot be sustainable unless the cultural practices of communities are recognized, respected, enhanced and incorporated into development processes
- communities will never escape from poverty until their human rights are respected and they have a say in how they are governed

4.3 Environmental Sustainability

ERFA acknowledges that:

- Sustainable development cannot be defined in economic terms alone
- Poverty and environmental degradation are interwoven and it is the poor who suffer most from such degradation
- Projects need to consider their impact on the environment and adequate attention needs to be given to potential environmental problems or benefits and appropriate mitigation or enhancement measures need to be considered in project planning and implementation
- Major threats caused by human destruction of the environment are the impacts of climate change, flooding, salinity, habitat destruction, desertification, pollution and urban expansion
- Development is not sustainable if it jeopardizes future generations

5. Policy

With respect to sustainable development, ERFA is committed to:

- A partnership approach to development characterised by integrity, accountability and transparency
- Undertaking in-depth community consultations and needs assessments in developing programs with communities
- Ensuring meaningful community participation in program design, implementation and evaluation
- Seeking to understand and respect the perspectives of those with whom it works in partnership
- Fostering self-sustaining positive change through the empowerment and capacity development of all members of the communities with which it works
- Giving priority to projects which engage with the most marginalised and exploited
- Enabling the development of resilient, sustainable communities that over time will lead to local management and autonomy
- Being inclusive and offering support in a spirit of human solidarity regardless of race, gender, religious or political beliefs

- Respecting and protecting the human rights of all members of the communities with which it works, including rights of access to education, healthcare, sustainable livelihoods and income-generation opportunities and safety from violence and freedom from discrimination
- Promoting and advocating the rights of women and children
- Promoting and advocating sustainable living and prudent use of earth's resources

6. Approach

The following concepts and strategies are fundamental in working to achieve sustainable development.

7. Community Development

ERFA promotes a partnership approach through engagement in Community Development processes which:

- Combine community with development and rely on interaction between people for joint action
- Engage communities in processes aimed at improving their economic, social and environmental circumstances
- Enable communities, through joint action and participation, to become vital, not just economically but as strong functioning communities in themselves

In this process, community is both the means and end of community development.

8. Capacity Building

Community development and capacity building interlock and are essential strategies for building project sustainability. Both are founded on the belief that individuals become engaged in their own development in a more sustainable way through functioning in groups. Hence, groups are a critical vehicle in development processes. While community development enables and empowers communities to take joint action, capacity building broadens the concept to incorporate the development of the competencies and capabilities of individuals, groups and communities essential for sustained, self-generated development.

Capacity building facilitates communities to realise their own development objectives and is based on the premise that recipients of aid must be empowered to manage their own development agendas. Hence, the foundations of effective capacity building include:

- project ownership and direction by the local community
- belief that learning and change occur over time and begin at the level of the individual
- use of participatory approaches at all stages
- utilising and building on local knowledge and existing capacity to develop a vision for the future
- sensitivity to the existing environment
- gender and cultural sensitivity
- building sustainability through developing strong relationships with and between stakeholders to generate a high level of ownership
- a continuous cycle of evaluation

The relevant capacity building in-country contexts for ERFA are individuals, groups, communities and organisations.

The in-country capacity building methods and techniques utilised in ERFA supported projects include: community development, education, training, mentoring and skills transfer.

9. Protection of Human Rights

ERFA believes that sustainable development and human rights are interdependent and mutually reinforcing. For development to be sustainable communities in developing nations need to have secure and long-term access to the resources required to satisfy their basic needs, be they economic, social, cultural, civil or political.

10. Gender Equality

ERFA recognizes that gender rights are human rights and that promoting gender justice is promoting human rights.

ERFA believes that gender justice is fundamental to overcoming poverty and that empowering women empowers communities and is of intrinsic importance in eradicating poverty and achieving sustainable development.

ERFA supports the third UN Millennium Development Goal, *to promote gender equality and empower women*. ERFA's commitment to gender equality is detailed in its Gender Equity Policy. In summary, ERFA is committed to:

- adopting a rights-based approach to issues of gender
- modelling best practice in gender justice
- protecting women from discrimination based on gender
- supporting women in achieving leadership positions in their communities
- ensuring that women's voices are heard in decision making processes
- providing specific support to women's organisations
- eliminating gender inequalities in access to and control over resources, material benefits and education
- including gender training in capacity building programs
- fully integrating gender equality concerns into program management and evaluation systems
- encouraging gender balance in all working groups and initiatives

11. Environmental Sustainability

ERFA believes that work for sustainable development and work for a healthy, sustainable environment are interconnected and must proceed together. Therefore, ERFA requires that:

- where appropriate, its in-country partners undertake an environmental assessment prior to the implementation of projects to demonstrate that proposed activities will not have a detrimental effect on land, flora and fauna and traditional culture and practice
- its in-country partners will comply with the relevant environmental laws that prevail in their country
- its partners will enable their personnel to avail of in-country education and training opportunities for developing improved knowledge and skills relating to environmental sustainability
- its in-country partners will actively support national and international campaigns and initiatives that promote sustainable environmental management.

12. Scope

This policy is to be applied in the design, implementation, operation and evaluation of all ERFA supported projects in developing nations. This includes projects governed directly by ERFA and those supported through in-country partner agreements.

13. Implementation & Responsibility

- The CEO is responsible for communication of this policy to all ERFA personnel and in-country project partners
- The CEO is responsible for ensuring that in-country project partners incorporate the policy's requirements into their standard operating procedures
- This policy is to be included in partner compliance documentation
- Knowledge and understanding of this policy is to be included in the induction process for new Australia based ERFA staff
- ERFA Directors are responsible for the authorisation of this Sustainable Development Policy and the scheduling of its regular review
